**Skin Care:** We offer prescription skin care lines including Obagi, MD Forte and Neostрата. These products help you maintain the results you desire and prepare for future treatments. They use alpha-hydroxy acids to reveal smoother, more radiant skin.

**Mineral Make-up:** We carry Jane Iredale make-up, with all natural ingredients. This make-up is perfect for all skin types and gives a flawless, yet natural finish.

**Chemical Peels:** This involves application of a concentrated strength of alpha-hydroxy acids in the office to remove several layers of dead skin cells. This allows the newer skin below to shine through, giving a youthful glow.

**Microdermabrasion:** This technique mechanically removes the top layers of dead skin cells using crystals and a vacuum. We use a medical-grade microdermabrasion system much stronger than those found in salons or day-spas. We can also combine the microdermabrasion with a chemical peel, called a micropeel, for a more intense result.

**Injectable Fillers:** Restylane, Perlane, Juvederm and Radiesse are trade names of the injectable fillers that we use. These gel-like substances are injected below the skin to diminish the appearance of deeper lines (such as marionette lines and lines around the mouth) and also enhance the fullness and shape of the lips.

**BOTOX®:** We use BOTOX® Cosmetic injections for dynamic wrinkle reduction and hyperhidrosis (excessive underarm sweating).

Pre-op Post-op

**Synercool:** Our office also uses a device called the Synercool that uses refrigerated air directed at treatment areas to virtually eliminate discomfort associated with laser hair reduction and vein treatments.

**Syneron Emax Laser System:** This cutting edge laser technology combines optical laser energy, intense pulsed light and radiofrequency in the patented Elos™ system. Turner Medical Spa is the first and only office to introduce this laser to the area. This system increases both safety and efficacy while using less overall energy, therefore decreasing side effects and discomfort. A variety of treatments are available with this system including:

- Permanent Hair Reduction*
- Skin Tightening*
- Wrinkle Reduction*
- Skin Rejuvenation*
- Spider Vein Treatment*
- Acne Treatment*

Skin Rejuvenation & Skin Tightening

Hair Reduction after 5 Laser Treatments

**Vein Treatments:** We use a combined approach implementing sclerotherapy and laser treatments to diminish the appearance of spider veins and small varicose veins virtually anywhere on the body. Sclerotherapy involves injecting a solution (sclerosant) directly into the veins to effectively eliminate the vein from the inside out. We use safe and nearly painless sclerosants for optimal results. Laser treatments target the pigment in the vessels to coagulate the blood and therefore close off the unwanted veins.

Before After

**Acne Treatments:** Our office develops a comprehensive treatment plan unique to each patient including prescription medications and skin care, microdermabrasion, chemical peels, and advanced laser treatments.
